	Urgent	Not Urgent
Important	**Do - (Your MVP)** ● Continuous infinite rotary input ● Push button ● Microcontroller (STM32, arduino, RasPi) ● Firmware to read signals and communicate over USB-C ● Companion App on Mac that decodes input and changes volume and mix	**Schedule - (For V2.0+)** ● Use a motor instead of a rotary knob or encoder for haptic feedback ● Custom 3d printed enclosure ● Floating mac notch UI element instead of windowed app
Not Important	**Delegate - (Use a library)** ● Use CoreAudio library for interfacing with mac speakers ● Use existing library for communicating with microcontroller over USB-C ● Use an existing button debouncer instead of writing my own	**Delete - (Cut it)** ● Bluetooth/wireless functionality ● LCD Display screen ● Custom PCB
